## FOLDING 180®

## THE RIGHT ALTERNATIVE

Folding 180 hardware provides a stable, silent and ergonomic door movement. The door closes against a rebate on three sides, ensuring an excellent acoustic seal.

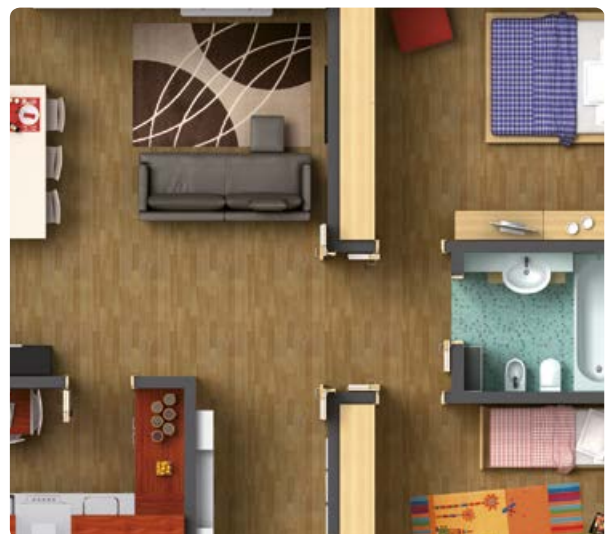

Folding 180 is a hinge which is fixed to the top of the door. The Folding 180 hinge causes the panel fitted with the handle to move parallel to the wall.

The door moves when the handle is pulled and the movement is as stable as that of a swing door fitted with traditional hinges.

As a result of the space needed for an opening and an open door the Folding 180 system offers a perfect solution when configuring a room layout where there is a restriction in the available space around a door opening.

A Folding 180 - fitted door can be used as an alternative to swing doors, doors sliding inside and outside walls, folding doors and roto - translating doors.

Folding 180 hardware can also be used on mobile walls and walk-in wardrobes.
